- 8-30V DC Input for Vehicles
- Protective Back Cover for Cables
- On Screen Control Panel
- Standard Universal Connectors
- VESA Mounting
- Rugged Lightweight Aluminum Enclosure
- 1024x768 Resolution

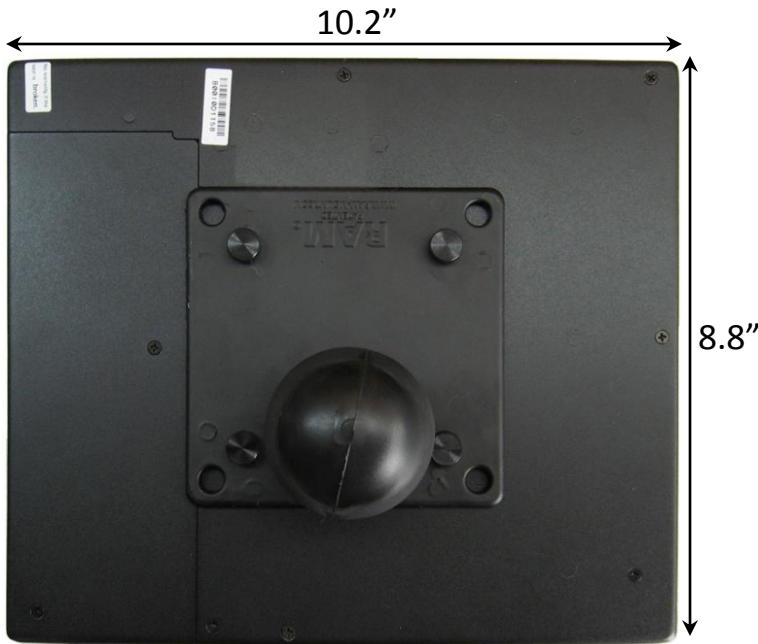

For mobile computing solutions in small spaces such as field vehicles for municipalities, industry, or emergency services the AcuTouch 10" monitor is a compact and cost effective solution. At only 1.5 inches thick this monitor could be mounted in the smallest of vehicles and still be easy to use. The touch screen interface eliminates the need for a mouse and a keyboard can be quickly attached using the external USB Port. The AcuTouch also uses the universal VESA mounting system allowing us to mount it virtually anywhere.

The easy to use on screen display allows the user to quickly change the brightness and contrast of the screen using four ergonomic controls located on the front panel. The AcuTouch 10 inch monitor is designed to be used in environments and situations outside of the realm of "normal" or domestic computing. Therefore, we have reinforced it with a rugged aluminum enclosure so that the AcuTouch lasts longer than the vehicle it's mounted in.

AcuTouch 10"

SPECIFICATIONS

VESA Ball Mount System
