Features

- 450 Nit LCD Touch Screen
- 8-30V DC Input for Vehicles
- Protective Back Cover for Cables
- On Screen Control Panel
- Standard Universal Connectors
- VESA Mounting
- Rugged Lightweight Aluminum Enclosure

The 15 inch AcuTouch LCD Touch Screen is a popular choice for public safety providers and industry as its large size and various mounting options make it both easy to read and use. In addition to the standard VESA system employed on all of our monitors, the 15 inch AcuTouch also has a convenient bezel design which makes it especially useful for panel mounting. The touch screen features resistive touch technology as all our monitors do so that the system can be easily used even with gloves on.

As with all our products the 15 inch AcuTouch is built with a rugged design and is protected by a lightweight aluminum shell. This design extends the life of the monitor ensuring it will be operational for the life of the vehicle and beyond.

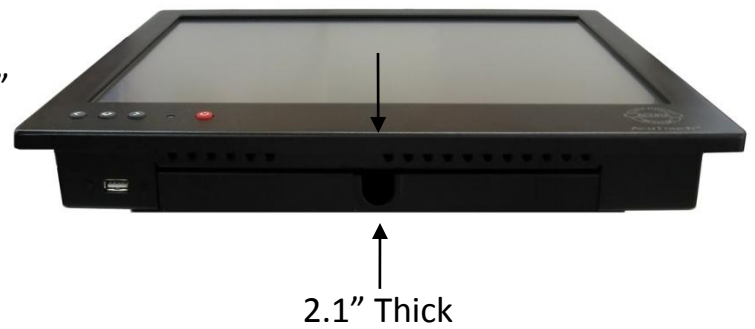

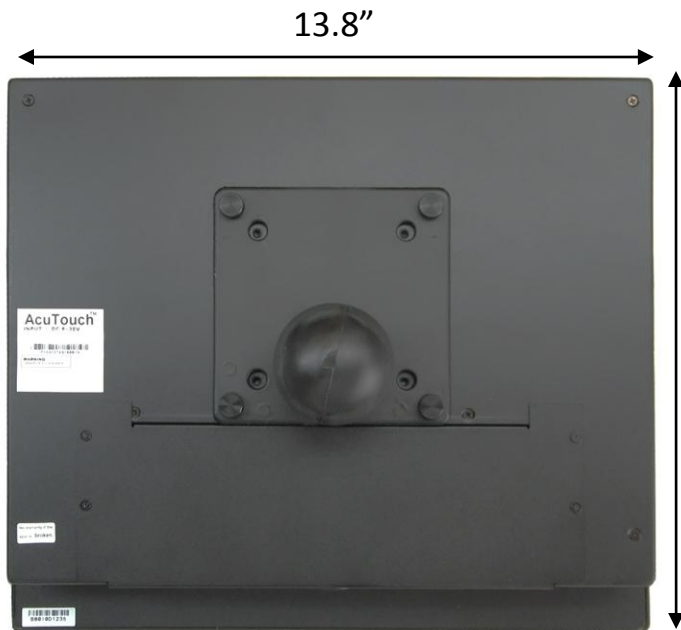

The connections for the AcuTouch are all non proprietary and can be easily connected to any of our PowerBrick computers. For ease of installation we also provide a single cable that bundles all of the different connections such as USB, Serial, and DC power together so that only one cable needs to be run inside the vehicle.

AcuTouch 15"

SPECIFICATIONS

VESA Ball Mount System
