

### Applications

- Fire Departments
- EMS
- Law Enforcement
- Fleet Management
- Industrial Vehicles

### Features

- **1600 NITS LED Screen**
- **Fully sunlight readable**
- **Extream -40C to 60C operational Temp.**
- **8-30V DC Power**
- **Resistive touch screen**
- **Rugged aluminum body**
- **Auto and Dial Dimming**
- **VESA mounting system**
- **External USB Port**
- **Standard connectors (Serial, USB, VGA)**
- **Microphone & Dual speakers**

The AcuBrite 1600 Nit monitor is the most advanced monitor in the mobile computing industry. It features state of the art LED (Light Emitting Diode) backlighting technology that makes it more versatile than any other type of monitor available. Firstly, the AcuBrite triumphs over any other monitors in the industry in terms of brightness. This means that first responders and industrial users can easily read the AcuBrite in the sunlight filled cab of any vehicle. The AcuBrite also runs flawlessly in extreme heat and extreme cold, conditions that many LCDs falter in. Finally, the AcuBrite LED monitor also has significantly less power draw for those users concerned about power consumption.

The AcuBrite, like all of our products, is designed to be used in rugged environments and high stress situations which is why we have included features like the instant dimming dial for night time viewing, the external USB port, and the rugged aluminum enclosure. The AcuBrite also comes in two convenient sizes, a large 15" and a more compact 12" model.
